Overview

I wanted to see if there's any relationship between the amount of money a country spends on research and development (R&D) and the number of Nobel Prize laureates produced by the country. I expect that there is such a relationship to some extent. While money spent on R&D does not necessarily mean the money is going towards science-based R&D for example, it can

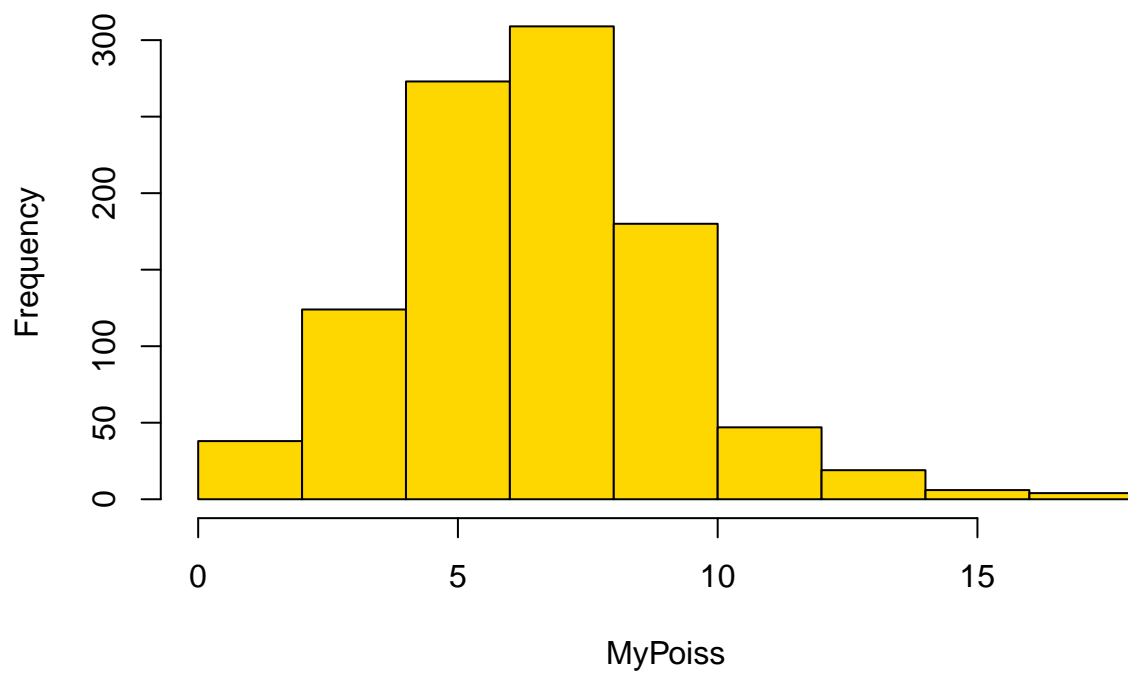

```
# try.dev.off()
MyGauss = rnorm(1000)
hist(MyGauss, col = "gold1")
```

Histogram of MyGauss

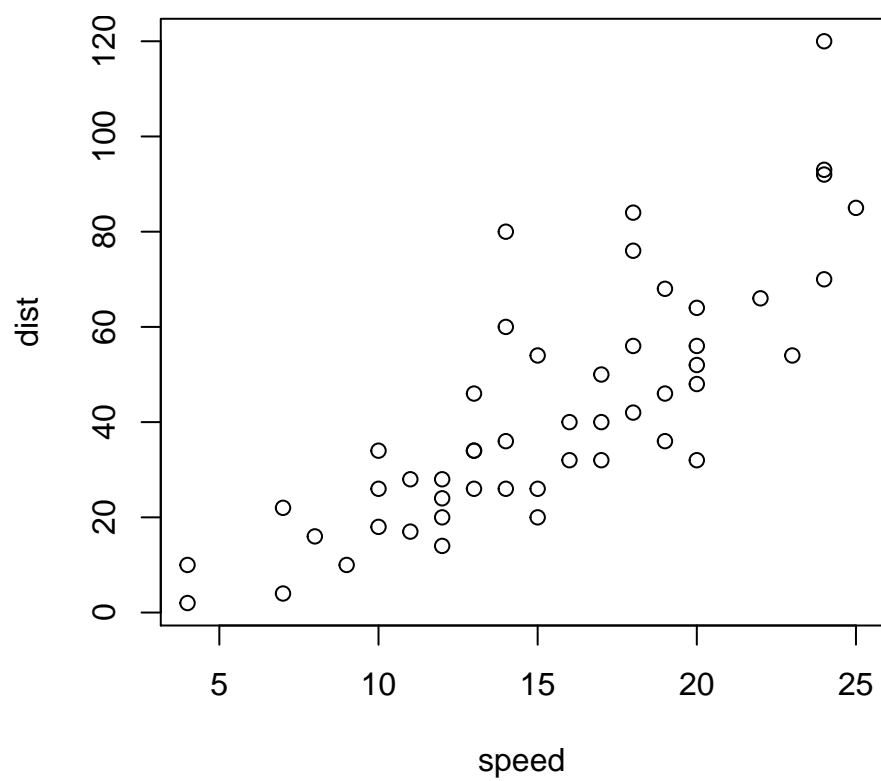

```
MyPois = rpois(1000, lambda = 7)
hist(MyPois, col = "gold1")
```

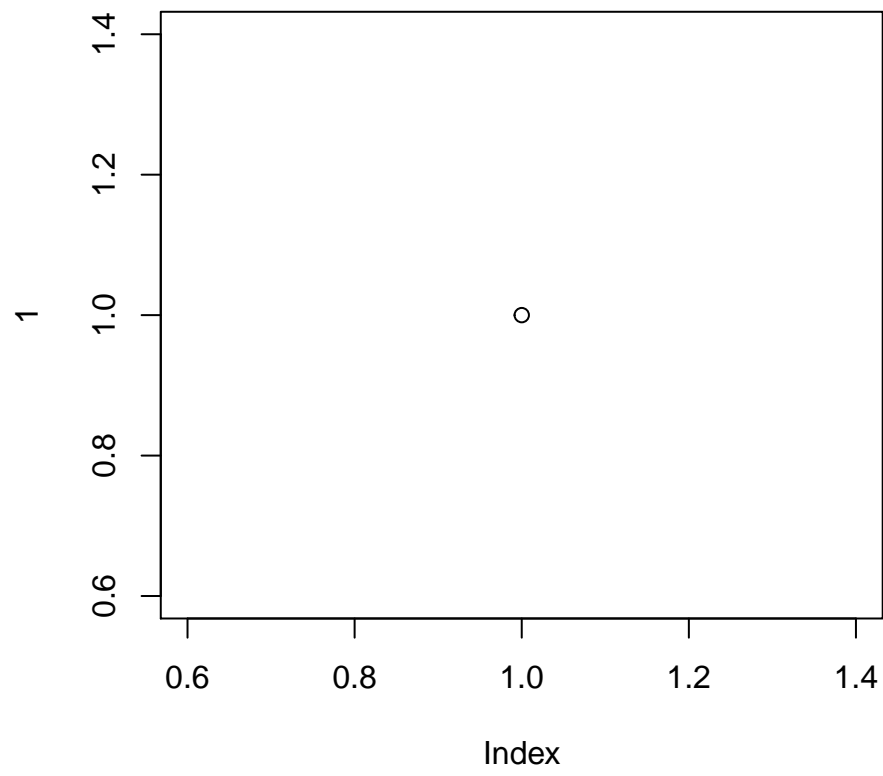

Histogram of MyPoiss

```
plot(cars)
```

```
plot(1)
```
